Apex Triggers:

a) Get Started with Apex Triggers :

AccountAddressTrigger:

```
trigger AccountAddressTrigger on Account (before insert , before
update) {
    for (Account a : Trigger.new){
         if(a.Match_Billing_Address__c == true){
                a.ShippingPostalCode =     a.BillingPostalCode;
    }

    }
}
```

b) Bulk Apex Triggers :

ClosedOpportunityTrigger:

```
trigger ClosedOpportunityTrigger on Opportunity (after
insert,after update) {
list<Task> newTask= new list<Task>();
    for(Opportunity oppWon :[Select Id from Opportunity where
StageName='Closed Won'
                            and Id in: Trigger.new]){
        newTask.add(new Task (Subject ='Follow Up Test
Task',WhatId=oppWon.Id));
    }
    if(newTask.size()>0){
        upsert newTask;
    }
}
```

Apex Testing:

a) **Get Started with Apex Unit Tests:**

VerifyDate:

```
public class VerifyDate {
```

```
     public static Date CheckDates(Date date1, Date date2) {
          if(DateWithin30Days(date1,date2)) {
               return date2;
          } else {
               return SetEndOfMonthDate(date1);
          }
     }

     private static Boolean DateWithin30Days(Date date1, Date
date2) {
          if( date2 < date1) { return false; }

          Date date30Days = date1.addDays(30); //create a date
30 days away from date1
          if( date2 >= date30Days ) { return false; }
          else { return true; }
     }

     private static Date SetEndOfMonthDate(Date date1) {
          Integer totalDays = Date.daysInMonth(date1.year(),
date1.month());
          Date lastDay = Date.newInstance(date1.year(),
date1.month(), totalDays);
          return lastDay;
     }
}
```

TestVerifyDate:

```
@istest
public class TestVerifyDate {
    @istest Static Void test1(){
        Date d =
Verifydate.Checkdates(date.parse('01/01/2022'),date.parse('01/03
/2022'));
        System.assertEquals(date.parse('01/03/2022'),d);
    }
    @istest Static Void test2(){
        Date d =
Verifydate.Checkdates(date.parse('01/01/2022'),date.parse('03/03
/2022'));
```

```
        System.assertEquals(date.parse('01/31/2022'),d);
    }
}
```

b) Test Apex Triggers:

RestrictContactByName:

```
trigger RestrictContactByName on Contact (before insert, before
update) {

     For (Contact c : Trigger.New) {
          if(c.LastName == 'INVALIDNAME') {
               c.AddError('The Last Name "'+c.LastName+'"   is
not allowed for DML');
          }

     }

}
```

TestRestrictContactByName:

```
@isTest
public class TestRestrictContactByName {
     @isTest
    public static void testcontact(){
        contact ct = new contact();
        ct.LastName = 'INVALIDNAME';
        database.Saveresult res = Database.insert(ct,false);
        System.assertEquals('The Last Name "INVALIDNAME" is not
allowed for DML',res.getErrors()[0].getMessage());

    }
}
```

c) Create Test Data for Apex Tests:

RandomContactFactory:

```
public class RandomContactFactory {
    Public static List<contact> generateRandomContacts (integer
num, string lastName){
        List<Contact> contactlist = new list<contact>();
        for(integer i=1;i<=num;i++){
            contact ct = new contact(FirstName = 'Test' +
i,LastName= lastName);
            contactlist.add(ct);
        }
       return contactlist;
    }
}
```

Asynchronous Apex:

a) Use Future Methods:

AccountProcessor:

```
public class AccountProcessor {
@future
public static void countContacts(List<Id> accountIds){
     List<Account> accounts = [Select Id, Name from Account
Where Id IN: accountIds];
     List<Account> updatedAccounts = new List<Account>();
     for (Account account :accounts){
     account.Number_Of_Contacts__c = [Select count() from
Contact Where AccountId=: account.Id];
     System.debug('No Of Contacts = '+
account.Number_Of_Contacts__c);
      updatedAccounts.add(account);
     }
     update updatedAccounts;
     }
}
```

AccountProcessorTest:

```
@isTest
public class AccountProcessorTest {
    @isTest
     public static void testNoOfContacts(){
          Account a = new Account();
          a.Name = 'Test Account';
          Insert a;

          Contact c= new Contact();
          c.FirstName = 'Bob';
          c.LastName= 'Willie';
          c.AccountId = a.Id;

          Contact c2 = new Contact();
          c2.FirstName='Tom';
          c2.LastName = 'Cruise';
          c2.AccountId = a.Id;

          List<Id>  acctIds = new List<Id>();
          acctIds.add(a.Id);

          Test.startTest();
          AccountProcessor.countContacts(acctIds);
          Test.stopTest();
    }
}
```

b) **Use Batch Apex:**

LeadProcessor:

```
global class LeadProcessor implements
Database.Batchable<sObject> {
     global Integer count = 0;

     global Database.QueryLocator
start(Database.BatchableContext bc){
        return Database.getQueryLocator('SELECT ID, LeadSource
FROM Lead');
```

```
    }

     global void execute (Database.BatchableContext bc,
List<lead> L_list){
        List<lead> L_list_new= new List<lead>();

          for(lead L:L_list){
               L.leadsource = 'Dreamforce';
               L_list_new.add(L);
               count += 1;
     }
          update L_list_new;
    }
        global void finish(Database.BatchableContext bc){
               system.debug('count = ' + count);
     }
}
```

LeadProcessorTest:

```
@isTest
public class LeadProcessorTest {

    @isTest
     public static void testit(){
          List<lead> L_list = new List<lead>();

          for (Integer i=0; i<200; i++){
          Lead L = new lead();
          L.LastName = 'name' + i;
          L.Company = 'Company';
          L.Status = 'Random Status';
        L_List.add(L);
       }
          insert L_List;

        Test.startTest();
          LeadProcessor lp = new LeadProcessor();
          Id batchId = Database.executeBatch(lp);
```

```
        Test.stopTest();
    }
}
```

c) **Control Processes with Queueable Apex:**

AddPrimaryContact:

```
public class AddPrimaryContact implements Queueable {
public contact c;
public String state;

public AddPrimaryContact(Contact c, String state) {
this.c = c;
this.state = state;
}

public void execute(QueueableContext qc) {
system.debug('this.c = '+this.c+' this.state = '+this.state);
List<Account> accList = new List<account>([select id, name,
BillingState from account where account.BillingState =
:this.state limit 200]);
List<contact> insertContact = new List<contact>();
for(account a: accList) {
contact c = new contact();
c = this.c.clone(false, false, false, false);
c.AccountId = a.Id;
insertContact.add(c);
}
insert insertContact;
}
}
```

AddPrimaryContactTest:

```
@isTest
public class AddPrimaryContactTest {

@testSetup
static void setup() {
```

```
List<Account> insertAccount = new List<Account>();
for(integer i=0; i<=100; i++) {
if(i <=50) {
insertAccount.add(new Account(Name='Acc'+i, BillingState =
'NY'));
} else {
insertAccount.add(new Account(Name='Acc'+i, BillingState =
'CA'));
}
}
insert insertAccount;
}

static testMethod void testAddPrimaryContact() {
Contact con = new Contact(LastName = 'LastName');
AddPrimaryContact addPC = new AddPrimaryContact(con, 'CA');
Test.startTest();
system.enqueueJob(addPC);
Test.stopTest();

system.assertEquals(50, [select count() from Contact]);
}

}
```

b) **Schedule Jobs Using the Apex Scheduler:**

c)

DailyLeadProcessor:

```
global class DailyLeadProcessor implements Schedulable {

    global void execute(SchedulableContext ctx) {

        List<Lead> leads = [SELECT ID, LeadSource FROM Lead
where LeadSource = '' LIMIT 200];

        for (Lead lead : leads) {
            lead.LeadSource = 'Dreamforce';
        }
```

```
        update leads;
    }

}
```

DailyLeadProcessorTest:

```
@isTest
private class DailyLeadProcessorTest {

    @isTest
    public static void testDailyLeadProcessor(){

        List<Lead> leads = new List<Lead>();
        for (Integer x = 0; x < 200; x++) {
            leads.add(new Lead(lastname='lead number ' + x,
company='company number ' + x));
        }
        insert leads;
        Test.startTest();
        String jobId = System.schedule('DailyLeadProcessor', '0
0 12 * * ?', new DailyLeadProcessor());
        Test.stopTest();
        List<Lead> listResult = [SELECT ID, LeadSource FROM Lead
where LeadSource = 'Dreamforce' LIMIT 200];
        System.assertEquals(200, listResult.size());

    }
}
```

Apex Integration Services:

a) Apex REST Callouts:

AnimalLocator:

```
public class AnimalLocator{
    public static String getAnimalNameById(Integer x){
```

```
        Http http = new Http();
        HttpRequest req = new HttpRequest();

req.setEndpoint('https://th-apex-http-callout.herokuapp.com/anim
als/' + x);
        req.setMethod('GET');
        Map<String, Object> animal= new Map<String, Object>();
        HttpResponse res = http.send(req);
            if (res.getStatusCode() == 200) {
        Map<String, Object> results = (Map<String,
Object>)JSON.deserializeUntyped(res.getBody());
      animal = (Map<String, Object>) results.get('animal');
        }
return (String)animal.get('name');
    }
}
```

AnimalLocatorTest:

```
@isTest
private class AnimalLocatorTest{
    @isTest static void AnimalLocatorMock1() {
        Test.setMock(HttpCalloutMock.class, new
AnimalLocatorMock());
        string result = AnimalLocator.getAnimalNameById(3);
        String expectedResult = 'chicken';
        System.assertEquals(result,expectedResult );
    }
}
```

AnimalLocatorMock:

```
@isTest
global class AnimalLocatorMock implements HttpCalloutMock {
    global HTTPResponse respond(HTTPRequest request) {
        HttpResponse response = new HttpResponse();
        response.setHeader('Content-Type', 'application/json');
        response.setBody('{"animals": ["majestic badger",
"fluffy bunny", "scary bear", "chicken", "mighty moose"]}');
        response.setStatusCode(200);
```

```
        return response;
    }
}
```

b) **Apex SOAP Callouts:**

ParkLocator:

```
public class ParkLocator {
    public static string[] country(string theCountry) {
        ParkService.ParksImplPort  parkSvc = new
ParkService.ParksImplPort(); // remove space
        return parkSvc.byCountry(theCountry);
    }
}
```

ParkLocatorTest:

```
@isTest
private class ParkLocatorTest {
    @isTest static void testCallout() {
        Test.setMock(WebServiceMock.class, new ParkServiceMock
());
        String country = 'United States';
        List<String> result = ParkLocator.country(country);
        List<String> parks = new List<String>{'Yellowstone',
'Mackinac National Park', 'Yosemite'};
         System.assertEquals(parks, result);
    }
}
```

ParkServiceMock:

```
@isTest
global class ParkServiceMock implements WebServiceMock {
   global void doInvoke(
           Object stub,
           Object request,
           Map<String, Object> response,
```

```
            String endpoint,
            String soapAction,
            String requestName,
            String responseNS,
            String responseName,
            String responseType) {
        // start - specify the response you want to send
        ParkService.byCountryResponse response_x = new
ParkService.byCountryResponse();
        response_x.return_x = new List<String>{'Yellowstone',
'Mackinac National Park', 'Yosemite'};
        // end
        response.put('response_x', response_x);
   }
}
```

c) **Apex Web Services:**

AccountManager:

```
@RestResource(urlMapping='/Accounts/*/contacts')
global class AccountManager {
    @HttpGet
    global static Account getAccount() {
        RestRequest req = RestContext.request;
        String accId =
req.requestURI.substringBetween('Accounts/', '/contacts');
        Account acc = [SELECT Id, Name, (SELECT Id, Name FROM
Contacts)
                       FROM Account WHERE Id = :accId];
        return acc;
    }
}
```

AccountManagerTest:

```
@isTest
private class AccountManagerTest {

    private static testMethod void getAccountTest1() {
        Id recordId = createTestRecord();
```

```
        RestRequest request = new RestRequest();
        request.requestUri =
'https://na1.salesforce.com/services/apexrest/Accounts/'+
recordId +'/contacts' ;
        request.httpMethod = 'GET';
        RestContext.request = request;
        Account thisAccount = AccountManager.getAccount();
        System.assert(thisAccount != null);
        System.assertEquals('Test record', thisAccount.Name);

    }
        static Id createTestRecord() {
        Account TestAcc = new Account(
        Name='Test record');
        insert TestAcc;
        Contact TestCon= new Contact(
        LastName='Test',
        AccountId = TestAcc.id);
        return TestAcc.Id;
    }
}
```

Apex Specialist Superbadge:

1. **Automated Record Creation**

MaintenanceRequestHelper.apxc

```
public with sharing class MaintenanceRequestHelper {
    public static void updateworkOrders(List<Case>
updWorkOrders, Map<Id,Case> nonUpdCaseMap) {
        Set<Id> validIds = new Set<Id>();

        For (Case c : updWorkOrders){
            if (nonUpdCaseMap.get(c.Id).Status != 'Closed' &&
c.Status == 'Closed'){
                if (c.Type == 'Repair' || c.Type == 'Routine
Maintenance'){
                    validIds.add(c.Id);

                }
            }
        }

        if (!validIds.isEmpty()){
            List<Case> newCases = new List<Case>();
            Map<Id,Case> closedCasesM = new Map<Id,Case>([SELECT
Id, Vehicle__c, Equipment__c,
Equipment__r.Maintenance_Cycle__c,(SELECT
Id,Equipment__c,Quantity__c FROM Equipment_Maintenance_Items__r)
                                                          FROM
Case WHERE Id IN :validIds]);
```

```
            Map<Id,Decimal> maintenanceCycles = new
Map<ID,Decimal>();

wp.clone();
                     wpClone.Maintenance_Request__c = nc.Id;
                     ClonedWPs.add(wpClone);

                 }
             }
             insert ClonedWPs;
         }
    }
}
```

MaitenanceRequest.apxt

```
 trigger MaintenanceRequest on Case (before update, after
update) {

    if(Trigger.isUpdate && Trigger.isAfter){

        MaintenanceRequestHelper.updateWorkOrders(Trigger.New,
Trigger.OldMap);

    }

}
```

2. Synchronize Salesforce data with an external system

WarehouseCalloutService.apxc :-

```
public with sharing class WarehouseCalloutService implements
Queueable {
    private static final String WAREHOUSE_URL =
'https://th-superbadge-apex.herokuapp.com/equipment';

    @future(callout=true)
    public static void runWarehouseEquipmentSync(){
        Http http = new Http();
```

```
        HttpRequest request = new HttpRequest();

        request.setEndpoint(WAREHOUSE_URL);
        request.setMethod('GET');
        HttpResponse response = http.send(request);

        List<Product2> warehouseEq = new List<Product2>();

        if (response.getStatusCode() == 200){
            List<Object> jsonResponse =
(List<Object>)JSON.deserializeUntyped(response.getBody());
            System.debug(response.getBody());

            for (Object eq : jsonResponse){
                Map<String,Object> mapJson =
(Map<String,Object>)eq;
                Product2 myEq = new Product2();
                myEq.Replacement_Part__c = (Boolean)
mapJson.get('replacement');
                myEq.Name = (String) mapJson.get('name');
                myEq.Maintenance_Cycle__c = (Integer)
mapJson.get('maintenanceperiod');
                myEq.Lifespan_Months__c = (Integer)
mapJson.get('lifespan');
                myEq.Cost__c = (Integer) mapJson.get('cost');
                myEq.Warehouse_SKU__c = (String)
mapJson.get('sku');
                myEq.Current_Inventory__c = (Double)
mapJson.get('quantity');
                myEq.ProductCode = (String) mapJson.get('_id');
                warehouseEq.add(myEq);
            }

            if (warehouseEq.size() > 0){
                upsert warehouseEq;
                System.debug('Your equipment was synced with the
warehouse one');
            }
        }
    }
```

```
    public static void execute (QueueableContext context){
        runWarehouseEquipmentSync();
    }

}
```

3.Schedule synchronization using Apex code

WarehouseSyncShedule.apxc :-

```
global with sharing class WarehouseSyncSchedule implements
Schedulable{
   global void execute(SchedulableContext ctx){
       System.enqueueJob(new WarehouseCalloutService());
   }
}
```

4.Test automation logic

MaintenanceRequestHelperTest.apxc :-

```
@istest
public with sharing class MaintenanceRequestHelperTest {

    private static final string STATUS_NEW = 'New';
    private static final string WORKING = 'Working';
    private static final string CLOSED = 'Closed';
```

```
    private static final string REPAIR = 'Repair';
    private static final string REQUEST_ORIGIN = 'Web';
    private static final string REQUEST_TYPE = 'Routine
Maintenance';
    private static final string REQUEST_SUBJECT = 'Testing
subject';

    PRIVATE STATIC Vehicle__c createVehicle(){
        Vehicle__c Vehicle = new Vehicle__C(name =
'SuperTruck');
        return Vehicle;
    }

    PRIVATE STATIC Product2 createEq(){
        product2 equipment = new product2(name =
'SuperEquipment',
                                          lifespan_months__C =
10,
                                          maintenance_cycle__C =
10,
